

TEMPEST

In collaboration with UK tech-metal giants Architects, Fortin are proud to bring you the Tempest!

The Tempest Overdrive was created with Architects legends Adam Christianson and Josh Middleton with the simple goal of creating a super-versatile overdrive/boost solution that would be equally at home, in the studio or live.

The Tempest was designed as a high output overdrive pedal that would work perfectly pushing ANY amp into the brutal, exacting tone they are renowned for. For crushing uber tight rhythm tones, have the level up and the gain down, add some gain for lead playing, and your sustain will ring out like never before. Your amp will not believe what is hitting it and your tone will be elevated to all new levels of brutality while keeping the tightest control.

To ensure you get the absolute best out of your new pedal, we strongly recommend you take some time just playing with it to get to know the controls and how they react. Yes, that is right, we want you to play with it as much as possible!

The Tempest could not be easier to control... There are the standard Drive and Level controls, as well as High and Low Pass controls. These are not your regular tone controls, these frequencies are specifically placed to ensure that even at extreme settings, the pedal will do nothing but add to your tone.

BYPASS - True Bypass footswitch.

LEVEL - Adjusts the output of the pedal. The higher you have this, the louder your signal will be and push the input of your amp harder

GAIN - The amount of gain, or overdrive, is applied to your signal. The first part of the sweep is pretty clean, you really notice the gain coming in past about 11 o'clock.

LOW - Cuts the amount of low end that outputs from the pedal. The more you turn it, the more it cuts... and, don't ask about what frequency it cuts at, because we like to keep some things to ourselves!

HIGH - Cuts the amount of high end outputted from the pedal. The more you turn it, the more it cuts... and, just like above - we can't tell you what frequency it is!

POWER - 9-12vDC center pin negative (fully regulated) external adapter/power supply only. Power draw **25mA**

WARRANTY

For the full and up-to-date information about the Fortin warranty, please visit our website - www.fortinamps.com. You can also email us at info@fortinamps.com.

Setting suggestions

These are only suggestions - find your own tone, as these may not apply to your guitar, your amp or your fingers - use them as a starting point...

Tight Chugs

Taking your already higher gain tone and tighten it up...

Endless Leads

Wailing, sustain, harmonics... this will be your lead tone...

The Tightest Chugs

This is the very definition of the tightest chug tone you will ever hear...

Vintage Bright Fuzz

By sneaking in the gain and bringing up the low end, you will almost get a fuzz like response from your amp...
