

Setting suggestions

These are only suggestions - find your own tone, as these may not apply to your guitar, your amp or your fingers - use them as a starting point...

To ensure you get the absolute best out of your new pedal, we strongly recommend you take some time just playing with it to get to know the controls and how they react. Yes, that is right, we want you to play with it as much as possible!

Drive the front end of your amp cleaner to at first, getting more of its natural character, and then at higher gain settings, kick the overdrive in for a crushing mid-range push that takes your tone to a whole new level.

With a higher output than a typical OD pedal, with additional headroom and an irregular style of clipping, this pedal gives an outstanding blend of both boost and overdrive - all wrapped up in one easy to use pedal.

BYPASS - True Bypass footswitch.

LEVEL - Adjusts the output of the pedal. The higher you have this, the louder your signal will be and push the input of your amp harder.

GAIN - The amount of gain, or overdrive, is applied to your signal. The first part of the sweep is pretty clean, you really notice the gain coming in past about 11 o'clock. You should spend some time with this, trying it lower and then higher, as more gain is not always what is needed!

TONE - Not a regular tone control! Feeling more like a mid range punch control, at all the way off, it's flatter, more natural - at half way you are in the realms of a regular mid boosted OD, and at higher levels, that mid is pushed right forward while taking some of the low, flabby bass out making the HexDrive the tightest OD pedal available today.

POWER - 9-12vDC center pin negative (fully regulated) external adapter/power supply or battery (not included). Power draw **25mA**

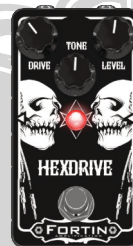

WARRANTY

For the full and up-to-date information about the Fortin warranty, please visit our website - www.fortinamps.com. You can also email us at info@fortinamps.com.

Clean hump

Take your clean tone and breathe life into it. Give it some power, some crunch, give it some balls. Your guitar will feel more alive and responsive...

800 mod

Got an amp you love? Got a tone you hear in your head but your amp is just not quite there? Well, the HexDrive can take your tone and instantly mod it to be the fire breather you always knew it could be...

Tighten up the gain

That classic TS thang, turn the gain down, put the level to taste and keep the tone a little low, and the low end of your amp will be tighter than a ducks exit point.

Front end smash

Smash the front end of your amp to take your tone on a path of devastating destruction...
